

POWER TECHNOLOGY

STEALTH AC drives for the full electric warship

- No electromagnetic interference, EMI, due to sine wave operation
- No harmonic voltage distortion, THD, on the ship
- No transformers for the propulsion are needed
- No electric losses in the drives at normal operation (BP)
- High redundancy in all levels of the drive systems
- Major reduction of space and weight for the drives
- No need for screened power cables and cable segregation
- Minimal need for cooling of drives and its systems
- Rugged and very well proven technologies, 6 vessels in operation
- MTBF and lifetime improved dramatically compared to competitors
- Simplified technology , 80 % reduction in number of components
